

CIPHERCOM PRODUCT PORTFOLIO

AZINABOOK

Simple, accountable financial management for groups and growing enterprises.

A shared digital environment for contributions, savings, member loans, fines, income, expenses, meetings and business records.

Software built around how African organisations work.

Nairobi, Kenya

Temporary non-employee atmospheric imagery

VALUE PROPOSITION

A clearer way to manage connected operations.

DESIGNED FOR

Chamas, women and youth groups, welfare associations, small enterprises, NGOs and organisations managing community financial programmes.

AzinaBook

AzinaBook helps chamas, community groups, small businesses and development programmes maintain organised and transparent financial records. Administrators gain better oversight while members receive clearer visibility into their activity and balances.

- 1 Contributions, balances and member obligations recorded inconsistently
- 2 Financial information held by one person or scattered across notebooks
- 3 Members unable to see clear, timely statements
- 4 Meetings and decisions separated from financial records
- 5 Umbrella organisations lacking programme-level visibility

MAJOR CAPABILITIES

Bring the important work into one operating environment.

Capabilities are configured and introduced according to the organisation's agreed scope, responsibilities and readiness.

- | | |
|--|--|
| ● Group and member administration | ● Contributions, savings and member balances |
| ● Internal lending and repayment tracking | ● Fines and other member charges |
| ● Income and expense recording | ● Meetings, decisions and group records |
| ● Member statements and reports | ● Mobile access for administrators and members |
| ● Dashboards for umbrella organisations and development partners | ● Secure, auditable financial workflows |

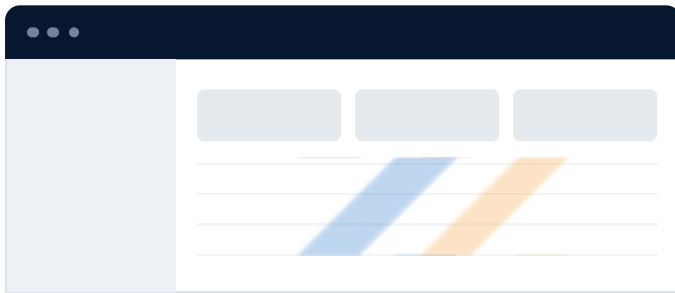

Built for practical use

Product capability is connected to discovery, configuration, training, deployment and ongoing support.

PRODUCT EXPERIENCE

Interfaces organised around real responsibilities.

Final brochure artwork should use current, approved screenshots captured without personal, customer or confidential data.

PRODUCT INTERFACE PREVIEW

Group financial overview

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

PRODUCT INTERFACE PREVIEW

Member statement

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

PRODUCT INTERFACE PREVIEW

Meetings and records

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

TYPICAL CUSTOMER JOURNEY

Move from priorities to sustained use.

A staged approach keeps product capability, people, information and operational readiness connected.

01

Set up

Create the group or enterprise, roles and operating preferences.

02

Bring members in

Organise membership and opening information with clear responsibilities.

03

Record activity

Manage contributions, loans, charges, income, expenses and meeting records.

04

Review & improve

Use statements, dashboards and reports to strengthen transparency and decisions.

Security & operational control

- Role-aware access for administrators and members
- Clear member balances and statements
- Supported onboarding and account-recovery processes
- Auditable records for important financial activity
- Approval-oriented workflows where responsibilities require control

IMPLEMENTATION & SUPPORT

A practical path to adoption.

Ciphercom supports group, enterprise and programme onboarding, including account setup, administrator orientation and adoption support. Larger programmes can agree a phased rollout, reporting requirements and support arrangements.

Requirements discovery

Configuration planning

Data preparation

User validation

Training & deployment

Continuing support

Ciphercom Ltd is a Nairobi-based software product and engineering company. Scope, integrations and rollout approach are agreed for each organisation.
