

CIPHERCOM PRODUCT PORTFOLIO

INVENTORY MANAGEMENT SYSTEM

Know what you have, where it is and when to replenish it.

A dependable view of purchasing, receiving and stock movement across stores, warehouses and operational locations.

Software built around how African organisations work.

Nairobi, Kenya

Temporary non-employee atmospheric imagery

VALUE PROPOSITION

A clearer way to manage connected operations.

DESIGNED FOR

Wholesalers, distributors, manufacturers, institutions, project stores and organisations managing stock across one or more operational locations.

Inventory Management System

Ciphercom's Inventory Management System helps organisations control products, suppliers, purchasing, receiving, issuance, transfers, adjustments and management reporting across one or more operational locations.

- 1 Uncertain stock balances across stores and warehouses
- 2 Purchasing decisions made without dependable movement history
- 3 Late replenishment and avoidable stock interruptions
- 4 Transfers and adjustments lacking clear responsibility
- 5 Management reports assembled manually from separate records

MAJOR CAPABILITIES

Bring the important work into one operating environment.

Capabilities are configured and introduced according to the organisation's agreed scope, responsibilities and readiness.

● Product and category management

● Supplier and purchasing workflows

● Goods receiving and stock issuance

● Multiple stores or warehouses

● Stock transfers and adjustments

● Reorder levels and alerts

● Batch or serial tracking where required

● User roles and approval controls

● Inventory valuation and movement reports

● Operational dashboards and exports

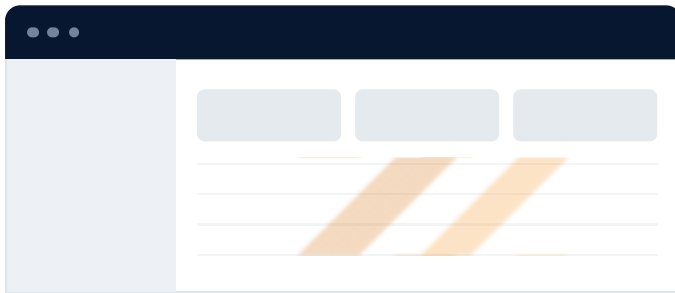

Built for practical use

Product capability is connected to discovery, configuration, training, deployment and ongoing support.

PRODUCT EXPERIENCE

Interfaces organised around real responsibilities.

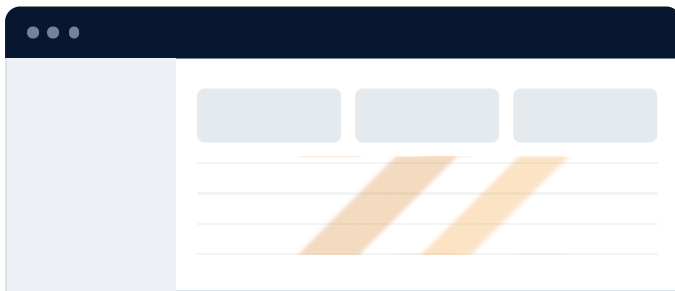

Final brochure artwork should use current, approved screenshots captured without personal, customer or confidential data.

PRODUCT INTERFACE PREVIEW

Stock and location overview

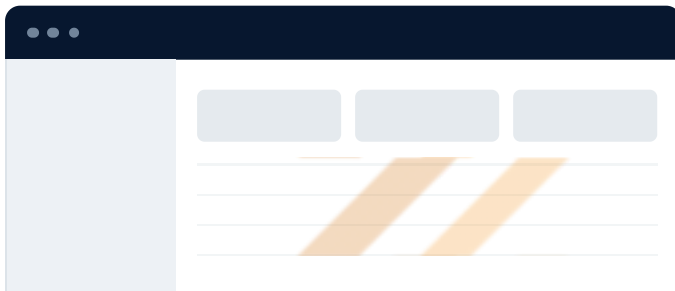

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

PRODUCT INTERFACE PREVIEW

Purchasing and receiving

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

PRODUCT INTERFACE PREVIEW

Movement and valuation reports

Clearly labelled placeholder. Replace with an approved product screenshot before final publication.

TYPICAL CUSTOMER JOURNEY

Move from priorities to sustained use.

A staged approach keeps product capability, people, information and operational readiness connected.

01

Map operations

Identify locations, products, responsibilities, controls and reporting needs.

02

Configure

Set up catalogues, stores, suppliers, users and agreed operating rules.

03

Start controlled movement

Train teams to receive, issue, transfer and adjust stock consistently.

04

Monitor

Use movement, valuation and replenishment views to support operational decisions.

Security & operational control

- User roles aligned to operational responsibilities
- Traceable stock movements and adjustments
- Backup planning, monitoring and continuing technical support
- Approval controls for sensitive stock processes
- Location-aware visibility and reporting

IMPLEMENTATION & SUPPORT

A practical path to adoption.

Implementation is shaped around locations, product catalogues, supplier processes, existing balances and control responsibilities. Ciphercom supports configuration, opening-data preparation, user training, go-live and continuing operational support.

Requirements discovery

Configuration planning

Data preparation

User validation

Training & deployment

Continuing support

Ciphercom Ltd is a Nairobi-based software product and engineering company. Scope, integrations and rollout approach are agreed for each organisation.
